

OIL & GAS

Tungsten carbide solutions for your wear problems

Innovative Carbide has been a leader in the impact and wear industry for more than 20 years with our high-quality tungsten carbide products. Our value-added services include semi-finished parts, reverse engineering, metallurgical services and applications engineering. Dedicated to providing total customer satisfaction, we offer fast quote turnaround, competitive pricing and delivery.

Inside our state-of-the-art facility, flexible manufacturing and CNC equipment allow us to handle everything from simple, one-piece part orders to custom fabrication of complex shapes. In fact, we excel at producing precise preforms with minimum grind stock while maintaining a high quality of standards.

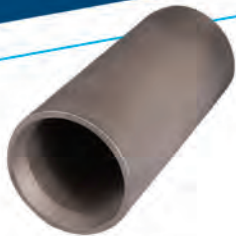

A cost effective way to control wear in aggressive environments

Drilling is harsh on equipment and the challenging oilfield environment demands carbide that performs, but you can extend the life of your wear parts, have greater productivity and minimize downtime.

Our selection of application-specific materials, combined with cost-effective, advanced manufacturing capabilities, ensure a quick response time targeted to the needs of the customer.

The critical wear components for this industry are manufactured to provide exceptional levels of performance. With the right solution to your wear problems, you can extend the life of your equipment and keep your systems at maximum operational levels.

At Innovative Carbide, Total Customer Satisfaction Is Our Ultimate Goal

Industry Concerns Everyday you face new challenges. Our manufacturing and engineering systems are designed to provide consistency in the ever-changing environment of the oil and gas industry.

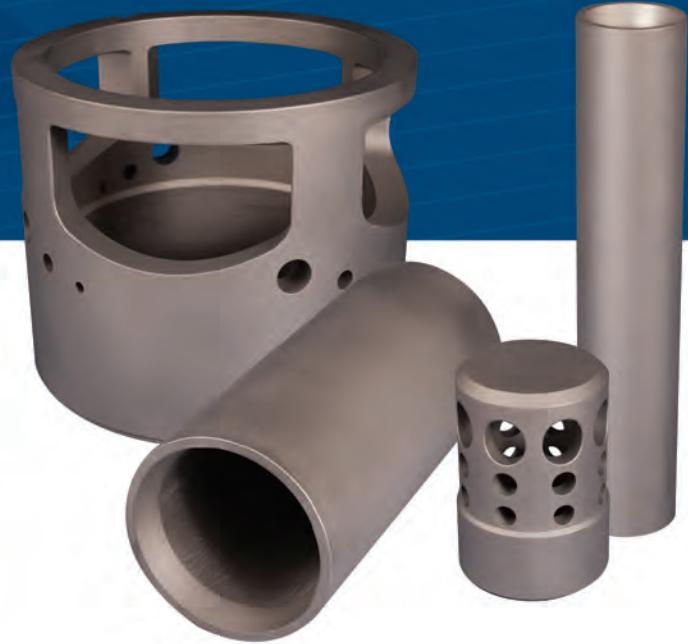

Teamwork Innovative Carbide has the manufacturing, engineering and applications experience to partner with strategic customers in order to determine the right material, process and product design to improve productivity. By partnering with our customers, we can collaborate on ways to provide innovative solutions for the industry's toughest manufacturing challenges.

Grades Our grade offerings provide exceptional performance for even the most aggressive applications. Our product experience can help you choose the right grade for the right application.

Excellence In Engineering

We combine our engineering team's extensive experience with the most cutting-edge technology to develop products that demonstrate superior productivity and performance.

Specializing in low and high-volume part production, prototype work, large parts and complex shapes, **Innovative Carbide** can help you find cost-effective solutions to your most demanding wear applications. When you need consistent, high performance parts, turn to **Innovative Carbide**.
